PROJECTS

MovieHub (Movie Website)

Tools used: HTML, CSS, JavaScript, PHP, Razorpay

MovieHub is a comprehensive movie and TV series database that provides personalized experiences and encourages user engagement. Key features include advanced search and discovery tools, along with a customizable watchlist to enhance user interaction. By integrating a robust movie API and powerful search capabilities, MovieHub offers extensive information on films and TV shows. Additionally, secure and seamless payment integration via Razorpay ensures a smooth transaction process for accessing premium content.

ChattingWeb

Tools used: Node.js, Express.js, Socket.IO,

ChattingWeb is a real-time chat application built with Socket.IO, Node.js, and Express.js. It allows users to communicate instantly through a simple interface. The backend handles requests and serves the chat UI, while Socket.IO enables real-time messaging without the need for page refreshes. The app supports multiple users and broadcasts messages to all connected clients. Built with HTML, CSS, and JavaScript, it can be easily extended with features like private messaging and user authentication.
